

Keyli Mora Rosales will lead and enhance ABS Wind's services in the U.S. wind market

One of the ABS' top personnel, Keyli Mora Rosales, is moving to our Miami headquarters to take on the role of Strategic Account Supervisor for the entire North American wind market.

Keyli arrives to invigorate our services in the US market after having built from the ground up our wind offerings in Costa Rica, one of the most important and emblematic territories of the ABS group, turning ABS Wind into a reference brand for the repair, maintenance, and supply of components and spare parts for wind turbines.

In the past few years, the wind industry in the US has seen remarkable expansion, thanks to the increased backing of regulatory systems and financial support for renewable energy. It is anticipated that the total installed wind power capacity will hit 321 GW by 2035. ABS Wind wants to strengthen and increase its wind services in North America while continuing to expand its global reach.

She will oversee reviewing and putting into action our new repair, maintenance, and spare parts supply service strategies for our wind gearboxes and main shafts repair facility in Big Spring (Texas), as well as supervise the accounts of our primary clients in the country.

During this phase of transition, Keyli will combine her new responsibilities while continuing to manage the activities of ABS and ABS Wind in Costa Rica and Central America as a Branch Manager, a feat seen and appreciated by the ABS family.

Keyli brings exceptional expertise in the field of wind energy, as well as in other industrial sectors across several territories.
